B. New shape to the cover of the book on “*Information Medicine*” (originally published in the BCnA : Vol. 9, Nos. 3&4, Summer/Autumn 2019: pp. 370–495); and now prepared for the printed re-edition).

A. Additional materials to the Socratic Dialogue previously held with Prof. Rudolf Klimek²

Man’s self-portrait image on Turin Shroud

KK. Many millions of US dollar equivalents were spent preserving, studying and exhibiting the very burial sheet with a picture of the photographic negative of a man with many features paralleling the crucifixion. He had been taken down from the cross and placed in a tomb, wrapped up in a shroud. The Shroud showed details with a clearer, more natural appearance than the visually observed image on the burial cloth, because the crucified and resurrected image of Jesus Christ certainly is not the result of any external intelligent force to do so. According to John Paul II it is right to foster an awareness of the precious value of this image, which everyone sees and no one at present can explain. There is a perfect match between the bloodstains of the Shroud of Turin and the face cloth that had been on Jesus’ head (*Greek*: sudarium), i.e. a supernatural (beyond the observable physical world) image of crucified man.

RK. The body image literally lies only on the very top exposed fibers of the weft thread, leaving the unexposed fibers of the threads of the weave unchanged. Furthermore, they show a uniform straw yellow coloration, which cannot be removed by rubbing or brushing with probe. Also the blood marks are not painted images. Therefore, the mechanism involved some type of radiation from the human body to a cloth surface draped over the body as collimated process producing an image, being inversely proportional to the distance between the body and draped cloth surface.

¹ See: Information equation $E = mc^2$ of cosmic beings – 20 questions to professor Rudolf Klimek: the president, World Information University; in the style of Socratic dialogue // *Biocosmology – neo-Aristotelism* Vol. 9, Nos. 3&4 (Summer/Autumn 2019): pp. 218–229.

² Devoted to the issue of “Man’s self-portrait image on Turin Shroud” (touched upon in the Q20 of the original Dialogue, on p. 229; but afterwards which has received the additional development.

KK. So, the image is seen at points where there is no contact between the two surfaces (non-contact transfer mechanism). Also none of the known artistic copies show any of the forensic or image characteristics that typify the Shroud of Turin, whose nature for a long time still remains as mystery of invisible God or only as one of many published hypotheses, e.g. painting, acid pigmentation, medieval photography, dust-transfer technique, bas-relief, biochemical reaction, energy source, ultraviolet radiation or even burial ointments.

RK. Now fortunately the interpersonal communication has to be perceived in the categories of information feedback ($E = i mc^2$) as an explanation of each mystery, including the origin of first known and the most important God's self-portrait image as informgraph appeared on Jesus' burial cloths! This image is the first known informgraph created as a result of resonance of information rays coming from Jesus with an information pattern formation, covering a layer of linen cloth adjacent to the body just 200 nm thick (by the way – this is 5,000 times smaller than a dot at end of this sentence: .), and corresponding to the cell thickness of the wall of a single flax fiber and – what is very important – without affecting further layers of fabric! Today, even almost invisible changes can be transformed into three-dimensional shapes, photographed and reproduced. What's more, a few meters away from the canvas, there is a clear three-dimensional visualization of a lying bearded man. Finally, the shroud features images of as many as 28 flowers from species currently growing in the vicinity of Jerusalem. One of them can be collected only in the afternoon (between 3 p.m. and 4 p.m.) and based on this, some people claim to know when the body was placed in the grave within an hour's accuracy. On the other hand, based on the location of the traces of injuries on the canvas, the vertical position of the corpse was accurately determined for an hour and then for 5 minutes horizontally with the face up after being removed from the cross, as well as the origin of the spots from bleeding before and after death, most of which are plasma mixed with blood in 6 : 1 ratio.

KK. The Shroud is evidence of a great crime against a unique person, examined by the world's greatest authorities along with the establishment of a new field of knowledge called Syndology, and covering a huge range of various specialists with the latest technology. For centuries, the mechanism of the creation of these images could not be explained until the basic views on the structure of the universe were changed, because when limited to its material interpretation, they simply did not take into account the basic information and the main component of the biocosmos next to matter and energy.

RK. The purpose of all changes in Nature is to realize in each being the perfection of its information as an resonance feedback: *input = i output*, e.g. the eyes testifies the emotional human state in the categories of information feedback ($E = i mc^2$) as an

exchange of verbal, vocal and also non-verbal signals (symbols) in a given situational context. Sight, light, color and form themselves are not only the names of the original parts of the information spacetime [1], because etymologically “information” (from Latin *informare* – to form or transform) means both the act of informing and the action of giving the form to the being, thus realizing its natural state and a development. Similarly, the word ‘being’ denotes the entirety of everything that exists in the essential or/and existential sense, which can be identifiable both as the whole of the universe (biocosmos) or as the quantum form of any part of it. Man for centuries did not take into account even the possibility of penetration through opaque objects newly rediscovered informational rays and patterns in the whole cosmic space-time whose information can be separated from the material-energy waves of light composed of photons. The visual informative rays follow in every place of space and by resonance with analogous cosmic information patterns may create an informgraph of the original object [2,3]. For example, the phenomenon of resonance is commonly used in imaging the internal state of the body by means of nuclear magnetic resonance, where the electromagnetic waves lead to technically resonant only atoms of selected elements. In the same manner the whole person resonates to an even single word [4].

KK. Practically everyone can see own silhouette visible in the mirror. Visible picture does not contain any single atom of the human body, but man may record this rise or disappearance. Each mirror image emerges thanks to resonating informational field (“pattern information”) in place of observer's localization, wherein the information rays coming from real object meet the sight rays from eyes, having the identical characteristics. The informational images, as the effect of resonance within local information pattern of the viewer or video place are not only electromagnetic waves, which can be fixed technically (e.g. photographed). Information rays is the bidirectional transparent event and therefore for man hidden, but existing in any object among its elements as not visible but a potential attribute.

RK. Every structure or process (being) in the universe contains in its cause information, which in the cause-effect feedback is a desired in the cause-effect feedback and immediately afterwards in created effect ($E = mc^2$). Now after nuclear magnetic resonance imaging technology was introduced it is possible to view a three-dimensional image of a body cell's inner states. whose individual form also applies to a person's psychological and social life, e.g. in the form of informative disease (informatonosis). For instance, lies, telling untruths, or concealment destroy the motivated human behavior, whose quintessence are information rays and patterns! This illness can also be caused by abandoning the hitherto successful methods of monitoring the intra-uterine development of the child by the increased risk of a change of the physiological progress of the pregnancy into pathological obstetric incidents.

KK. Peoples are most effectively protected by living according to autoteological principles, which means that man acts in accordance with their own and socially acceptable ethical and moral values. For example, man instead of the exchange of products and services for money (e.g. coins) unfortunately began to use only information of their values, but money indirectly still is associated with social life through the existence and work of individuals.

RK. Medicine is one of those unique areas of human activity, in which not only its subject is at the same time the subject of interest, but mainly all the theoretical (cognitive) achievements are directly connected with the art of the possible protection of life and restoring people to health. The scope of the means for this purpose is huge, ranging from single words and/or gestures, and ending with the use of space equipment. In this perspective, medicine seems to be the queen of all sciences, which obliges doctors and patients to continuously track the progress of general knowledge and its technological use.

Preface

Medicine is the most important human domain dealing with theoretical principles how to protect or restore personal health and simultaneously applying them into practice, what is prescribed in the book “**Psychoneurocybernetic conquest of carcinogenesis and cancers**” (published by Nova Science Publishers, Inc. New York 2015), which content was the main subject of the electronic world congress “Biocosmology and Cancer” in Cracow, printed successfully in the electronic journal “Biocosmology and neo-Aristotelism” [vol. 7(1,2,3/4) 2017, vol.8(1,2): 1–262]. The monograph “**Information Medicine**” is based also on the video-document of this congress (<http://tiny.pl/gnzdk> – lectures Konstantin S. **Khroutski**, Rudolf **Klimek**, Karl **Kratky**, Xiaoting **Liu**, Josef **Bremer**, Peter **Heusser**, Walter **Kofler**, Joseph G. **Schenker**, Piotr **Karocki**), promoting goal to bridge gaps between the expansion of information and its implantation in medical practice.

The field of the congress compassed a wide spectrum of subject from medicine of health to the cosmic technology, which was inaugurated by the collective articles of J. Bremer, K.S. Khroutski, R. Klimek, R. Tadeusiewicz and J.G. Schenker. Upon multi years own experiences the Authors presented the primary significance of human lifestyle in the formation and progress of social health along with importance of caring about the environment inhabited by people. They have summarized the public reactions to historic discovery of natural thermodynamic cause of cancer and infertility as well as the obstetrical prevention and psycho-neuroendocrine therapy of all diseases thus updated their earlier editions. This monograph should be of special interest to physicians, health-care givers and laymen, who cares about ethics in medicine, closely linked to certain human behaviors and procreation, e.g. now over 30% caesarean deliveries are performed simply due to maternal request, what incurred several risks none only for the baby, but also are related to appearance of cervical cancer of mother [**K.S. Khroutski, R. Klimek Biocosmological definition of information and its naturalist causative significance. *Biocosmology – neo-Aristotelism* 2018, vol.8 (2): 204–262; J.G. Schenker et al. (eds.) *Reproductive Medicine for Clinical Practice*. Springer V. (2018)].**

Infertility and cancers pertain to *natural phenomena* which, in contrast to common belief about their dramatic meaning, actually safeguard the existence of Homo sapiens. Infertility concerns about 20% of sexual partners in equal measure responsible for the lack of the desired offspring and can even concern a pair of healthy people, who exceptionally only in that relationship cannot have children. *Both phenomena* are linked by their inception from a *single cell*, every time selected from millions of gametes or from somatic cells endangered by the cessation of their metabolism, in which the whole multicellular organism is involved. Each cell grows in multicellular host organism, but the cardinal fact is the means by which cancer kills normal cells destroying healthy tissues, i.e. increasing dissipation of matter, information and energy in its environment. The essence of knowledge lies as much in a methodology of reaching the truth as in any view of what form that truth might ultimately take.

Each word is the informational part of world connected with individual person as **man is quantum of human verbal world**, which unifies people with transcendent beings, and that the Cosmos and the Earth are living entities of high complexity. Myth as a story about super-human beings of an earlier age existed in all preliterate societies to explain how universe came into existence and consists or to express the invisible power and invisible life? The observable universe is composed almost entirely of ordinary matter, but the whole Universe seems to be made of 4.9% atomic matter, 26.6% dark matter and 69.5% dark energy. The problem of matter and antimatter in the visible universe becomes now solved by the mass-

information-energy equivalence equation that is $E = mc^2$, since the amount of the released energy is usually proportional to the total mass of the collided matter and antimatter. The equal sign raised to the power of information ($=^i$) defines the **information** of each being, because it belongs to its cause and is already part of its effect. The existence of bidirectional information rays and patterns coming from the body has been used to explain many medical problems, in which quantum effects are often hidden by random atomic movements. In extreme cold (close to absolute zero) quantum physics suddenly becomes visible when all moving particles cease. However, we do not “see” the words, but we recognize the person speaking in the mirror as visible effect of information rays. What’s more, seemingly having no material component, the words can have the power to act if the person receiving them reacts to them with their behavior under the influence of the environment in accordance with the informational cosmic unity. Such expanding understanding of the psychoneurothermodynamic pathogenesis of diseases has brought medicine to a new age of prevention and therapy directed against multiple characteristics of cancer cells to prevent cancer development and the elimination of new cancer cells before they form clinically evident disease, which is generally considered fatal illness because its full symptoms can be seen only in the last period of an individual human life. But it is forgotten that only 5% of cancers exist in the absence of other diseases and in addition relate to the aging of the body what is important from the therapeutic point of view. The modern therapeutic aim is not only to destroy cancer cells without harming healthy tissues, but about strengthening the fight already in precancerous cells on the basis of the whole thermodynamic knowledge of material- informational-energetic equivalency.

Time and space primarily belong to the informational reality as e.g. perceived by people love, fear, hatred, jealousy, self-awareness, etc. Each of these feelings has a beginning and its conditions, as all the events and their perceived causes and sources, e.g. the verbal aspect cannot be separated from the body language, covering gestures, facial expressions, body posture and the timbre of the voice, and even yawning and grunts. Man also for centuries was accustomed to light rays penetrating through only the transparent structures, and did not take into account the possibility of penetration even through opaque objects newly discovered in the twentieth century the radiation of neutrinos, and now gravitational and finally informational rays. New thermodynamic dissipative model of cancer has also proved to explain psychosis (e.g. Schizophrenia) as well as socio-economic crises in which money, like cancer for the life of individual cells – acts as an alternative end for the social life of man.

The more humans know reality of the world, the more they know themselves in their uniqueness, with the question of the meaning of things and of their very existence. These are the questions which we find in the writings of Confucius and Lao-Tze, in the sacred writings of Israel, Christianity, in the Veda and the Avesta and in the philosophical writings of Plato and Aristotle. Although times change and knowledge increases, it is possible to discern a core of philosophical insight within the history of thought as a whole. Certain fundamental moral norms are shared by all. Thus beyond different schools of thought, there exists a body of knowledge which may be judged a kind of spiritual heritage of humanity. Yet the positive results achieved must not obscure the fact that reason, in its one-sided concern to investigate human subjectivity, seems to have forgotten that men and women are always called to direct their steps towards a truth which transcends them.

Information medicine in every country must be considered as a social system comprised of individual people as living subsystems, co- creating the inner state of human verbal world. According to **W. Korohoda** the most important thing is to introduce to medicine very useful concepts of medical thermodynamics by informative recognition of

morphological and energetic informational changes concerning all cellular form of life, leaving subcellular details to theoreticians, since they are not directly available for a physician in his practice. **The cellular form of life is the dividing line separating applied medicine (practice) from theoretical medicine**, at the same time being the basis for understanding etiopathogenesis of diseases due to modern technologies which armed physicians with a toolbox for monitoring human health and diagnosis of diseases at molecular level. Lately, the recognition of cancer as “Caesar of all diseases” has gained new importance when the biography of cervical cancer, originally known as mothers’ cancer and/or premature sexual intercourse cancer, was linked with the termination of pregnancy via cesarean section performed without obstetric indications. Preventing the plague of cesarean sections serves as an example of oncological prevention. In treating patients, doctors use scalpels, lasers, radioactive radiation and poisons as effective tools, part of which is also language, made up of words, which are understandable by persons. The word itself is even enough when treating the informatonoses. Therefore, a special place is taken by heredity and the upbringing of a person, who, due to her/his free will, lives according to own autoteleological scale of values and rules of human social life.

Our book we address not only to medical profession, but first of all to the public at large what can be seen from its contents and references as well as its video documentation in internet. Therefore, I desire to acknowledge the help and friendship received from so many **P.T. Scientists** who have contributed to this publication aiming that every person could understand the significance of health and the primary significance of own life style in the formation and progress of diseases.

Information Medicine is dedicated to All **P.T. Members** of the **International Academy of Human Reproduction** and the **Editorial Board of *Biocosmology – Neo-Aristotelism*** (and the **BCA** associates), as well as to the Magnificent Rectors **P.T. Krzysztof Penderecki** and **Ryszard Tadeusiewicz**, who as professors personifying resp. energy and matter.

Cracow-Zakopane Harena
24.12.2018

Rudolf Klimek
 $E = mc^2$

Concentrate your vision on the 4 small dots in middle of the picture for **about 35 seconds** and then take a look at any smooth white surface (wall or paper) where a circle of light will develop and **after blinking your eyes** a couple of times you will see a man's picture as a results of informational resonance of sight rays with local information patterns.

Medicine is the most important human domain due to applying into practice the theoretical principles how to protect or restore personal health. The monograph “**Information Medicine**” summarized the public reactions to historic discovery of natural thermodynamic cause of cancer and infertility as well as the prevention and therapy of all diseases thus updated the earlier editions of “**Psychoneurocybernetic conquest of carcinogenesis and cancers**” (Klimek R. 2015), “**Explained cause of cancer**” (Klimek R., Jasiczek D., Stencl J. 2013), “**Cancer and infertility. Truth and myth of medicine**” (Hodorowicz S., Jasiczek D., Klimek R., Tadeusiewicz R. 2011), “**Cancer – neoplasms and neoplastic diseases**” (Klimek R., Madej J.M., Sieroń A. 2006), “**Monitoring of pregnancy and prediction of birth date**” (Klimek R. 1994), “**Conquering cancer ourselves**” (Klimek R. 1990), “**Pre/Peri-Natal Psycho-Medicine**” (Klimek R. ed. 1992), “**Cancer – cause, determinants and host-defense**” (Klimek R. 1985), what illustrated the personal uninterrupted scientific cooperation since symposium “**Oxytocin and its analogs**”, which occurred in Cracow in 1963.

New medical age moved from the basic level of cellular nuclei to the level of atomic nuclei with the universal use of their magnetic resonance and its thermodynamic interpretation to satisfy human curiosity of earthly surroundings and the sense of life. **Man** is a quantum of human verbal world, which unifies people with the Cosmos and the Earth as living entities of high complexity. The problem of matter and antimatter in the visible universe becomes now solved by the matter-information-energy equivalence equation $E =^i mc^2$. The equal sign (=) raised to the power of information (=ⁱ) in the formula denotes matter and energy as equal and the same, and it defines the **information** as the existence of each being from its beginning to its end form, because the beginning of each event belongs to its cause, but at the same time is already part of its effect.

Information medicine must be considered as a social system comprised of individual people as living quanta of human verbal world, which is the most important part of biocosmos. This monograph should be of special interest to physicians, health-care givers and laymen, who care about ethics in medicine, closely linked to certain human behaviors and procreation. **Every human resonates through the own information field** to the sounds, signs and words of directly observed material objects and /or to the indirect energetic changes in their material form of existence, creating a corresponding psychological or emotional state in a person’s mind, called **human conscience**. **Man** is endowed also with **free will**, which ensures a good social life as long as the eternal laws of nature are followed. Humans do not create these laws, but can only strive to understand them better in order to use them. Luckily, conscience also fulfills gratifying functions, such as the feeling of satisfaction or happiness which comes from performing a good deed, or even from simply differentiating good from evil.
